

Day Four Task Details

Abstract:

Create a function of type Generic so that it receives 5 marks, regardless of the type of these marks. Calculate the average, calculate the marks above and below the average and print the result on the screen.

Create a function to calculate a square root for two real numbers and display it. Errors must be trapped.

Specifications:

Does it behave as you expected?

Proposed methodologies:

Use Try & Catch and Generic Class.

Evaluation Criteria:

50% on functional Code

20% program workflow

20% Designing best GUI and UX

10% adding extra features that help archives better results.
